Facemasks

Sometimes, I may see people wearing face masks.

They are wearing a face mask to protect themselves from germs.

They are also wearing it to protect other people from getting sick.

A facemask covers someone's nose and mouth to keep germs from spreading when people cough or sneeze.

When someone wears a facemask, I cannot see their nose or mouth. But they can breathe and talk!

Sometimes, people may use a scarf or other piece of fabric as a facemask.

People who wear a facemask take it off when they get to their house.

Facemasks help keep everyone safe!
